Supplementary Figure 1.

Immunohistochemistry of sPLA₂-III in the colon of DSS-treated mice, related to Fig. 3.

The colon of WT mice treated for 6 days with DSS was subjected to immunohistochemistry using anti-sPLA₂-III or control antibody. The anti-sPLA₂-III antibody mainly stained collapsing epithelial cells. Although most inflammatory cells infiltrating beneath the damaged epithelium were sPLA₂-III-negative, a minor population of immune cells was sporadically stained for sPLA₂-III (*arrows*). Control antibody gave no staining.

Supplementary Table 1.

Microarray gene profiling of lipid-metabolic genes in the colons of *Pla2g3*^{+/+} and *Pla2g3*^{-/-} mice, related to Fig. 2e.

Expression profiles of genes associated with lipid biosynthesis, degradation, and consumption in *Pla2g3*^{-/-} (KO) colon relative to littermate *Pla2g3*^{+/+} (WT) colon with or without AOM treatment, as assessed by DNA microarray analysis. Fold changes (KO/WT) are indicated. Equal amounts of total RNA pooled from four mice for each genotype were used. Genes showing a >2-fold increase (red) or >50% reduction (blue) in expression are highlighted.

Lipogenesis and lipid mediator synthesis
